

## Commercial Airline Fatal Accident Rate

### Description

Limit the three-year rolling average fatal accident rate to 0.010 fatal accidents per 100,000 departures. This target is also referred to as Commercial Air Carrier Fatal Accident rate.

### Commentary (03/2007)

The goal for the end of FY 2007 is a three-year rolling average of 0.010 fatal accidents per 100,000 departures. The current rate is 0.023 fatal accidents per 100,000 departures. In December 2006, a scheduled part 135 fatal accident occurred in Alaska. It involved a Peninsula Piper PA-32-301 carrying one passenger. Both the passenger and the pilot were killed. We will not achieve this goal this fiscal year, as the best rate we can expect by year-end is 0.020 fatal accidents per 100,000 departures. (Air Tahoma comes off the rate in August 2007).
